PTM: N-glycosylated.
-i. DTM: N-glycosylated.
-i. DISEASE: Defects in KAL1 are a cause of Kal1mann syndrome (KAL1 OR KS), a genetic disorder that associates hypogonadotropic. hypogonadism and anosmia. In this disease, the normal embryonic migration of GNRH-synthesizing neurons from the olfactory placodes to the hypothalamic region as well as the axonal extension of olfactory neurons towards the forebrain are impaired.
-i. SIMILARITY: CONTAINS 4 FIBRONECTIN TYPE III-LIKE DOMAINS.
-i. SIMILARITY: CONTAINS 1 WAP-TYPE DOMAIN.

Pera I. , IVall R., Kirchhoff C.;
"Regional variation of specific gene expression in the dog epididymis as revealed by in-situ transcript hybridization.";
Int. J. Androl. 17:324-330(1994).
-!- SUBCELLULAR LOCATION: Secreted (Potential).
-!- SUBCELLULAR ELOCATION: Secreted (Potential).
-!- TISSUE SPECIFICITY: EPIDIDYMIS. HIGHEST LBVELS ARE FOUND IN THE CAUDA REGIONS. LOWER LEVELS IN THE DISTAL CAUDA. NOT DETECTED IN THE BFFERENT DUCTS.
-!- SIMILARITY: CONTAINS 2 WAP-TYPE DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

                  -!- FUNCTION: Has growth inhibitory activity (By similarity).
-!- SUBCELLULAR LOCATION: Secreted (Potential).
-!- SIMILARITY: CONTAINS 1 WAP-TYPE DOMAIN.
-!- CAUTION: Ref. 2 sequence differs from that shown due to frameshifts in positions 166 and 173.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Devinoy E., Hubert C., Schaerer E., Houdebine L.M., Kraehenbuhl J.P.; "Sequence of the rabbit whey acidic protein cDNA."; Nucleic Acids Res. 16:8180-8180(1988).

Genomics 18:667-672(1993).
-!- FUNCTION: STRUCTURAL COMPONENT OF CONNECTIVE TISSUE MICROFIBRILS THAT BINDS CALCIUM. FIBRILLIN-1-CONTAINING MICROFIBRILS PROVIDE LONG-TERM FORCE BEARING STRUCTURAL SUPPORT.
-!- SIMILARITY: CONTAINS 47 EGF-LIKE DOMAINS.
-!- SIMILARITY: CONTAINS 7 TGF-BETA BINDING PROTEIN DOMAINS.

Cai F., Bourbonniere M., Tang D., Hu S.L., Weber J.M.;

Nuclectide and deduced amino acid sequence of the bovine adenovirus type 7 proteinase.";

Nucleic Acids Res. 18:5567-5567(1990).

-! FUNCTION: THIOL PROTEAGE CLEAVING SPECIFIC GLY-ALA PEPTIDES IN A NUMBER OF VIRAL PRECURSOR PROTEINS (TERMINAL, IIIA, VI, VII, VIII, IIA AND MU) WHICH ARE REQUIRED FOR VIRION MATURATION. ALSO CLEAVES HOST CELLS CYTOSKELETAL KERATINS K7 AND K18.

-! CATALYTIC ACTIVITY: Cleaves proteins of the adenovirus and its host cell at two consensus sites: -Yaa-Xaa-Gly-Gly-|-Xaa- and -Yaa-Xaa-Gly-Ka-|-Gly- (in which Yaa is Met, Ile or Leu, and Xaa -Yaa-Xaa-Gly-Ka-|-Gly- (in which Yaa is Met, Ile or Leu, and Xaa

                                                          embryonic development from 9.0 d.p.c.

PTM: Synthesized in the endoplasmic reticulum as an inactive form which is proteolytically cleaved by a furin-like convertase in the trans-Golgi network before it reaches the plasma membrane to yield an active, ligand-accessible form. Cleavage results in a Cterminal fragment N(TM) and a N-terminal fragment N(EC). Following ligand binding, it is cleaved by TNR-alpha converting enzyme (TACE) to yield a membrane-associated intermediate fragment called onch extracellular truncation (NEXT). This fragment is then cleaved by presentlin dependent gamma-secretase to release a notch-derived peptide containing the intracellular domain (NICD)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         PTM: Phosphorylated.

DISBASE: Loss of the extracellular domain causes constitutive activation of the Notch protein, which leads to hyperproliferation of glandular epithelial tissues and development of mammary
                                                                                                                                                                                                                                                                                                                        SUBCELLULAR LOCATION: Type I membrane protein. Following proteolytical processing NICD is translocated to the nucleus. TISSUE SPECIFICITY: Highly expressed in lung, moderately in heart kidney, and at lower levels in the ovary and skeletal muscle. A very low expression is seen in the brain, intestine, liver and

"Human ligands of the Notch receptor.";
Am. J. Pathol. 154:785-794(199)
-!- FUNCTION: Functions as a receptor for membrane-bound ligands
Jaggedl. Jagged2 and Deltal to regulate cell-fate determination.
Upon ligand activation through the released notch intracellular
domain (NICD) it forms a transcriptional activator complex with
RBP-J kappa and activates genes of the enhancer of split locus.
Affects the implementation of differentiation, proliferation and

SUBMITCEG (ARR-1995) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: STRUCTURAL COMPONENT OF CONNECTIVE TISSUE MICROFIBRILS

THAT BINDS CALCIUM. FIBRILLIN-IO-CONTAINING MICROFIBRILS PROVIDE

LONG-TERM FORKE BRARING STRUCTURAL, SUPPORT.

FIBRILLIN-I MOLECULES OR WITH OTHER COMPONENTS OF THE

MICROFIBRILS (BY SIMILARITY).

-!- SIMILARITY: CONTAINS 47 EGF-LIKE DOMAINS.

-!- SIMILARITY: CONTAINS 7 TGF-BETA BINDING PROFEIN DOMAINS.
                                                                                                                                                                      ----- 38

TISSUE SPECIFICITY: EXPRESSED MAINLY IN BRAIN, WHERE IT IS MOST
ABUNDANT IN THE CEREBELLUM, CEREBRAL CORTEX AND THE OCCIPITAL
POLE; LOW EXPRESSION IN THE PUTAMEN AND THE THALAMUS. ACCORDING TO
REF.1, FOUND IN SPINAL CORD, TESTIS, LIVER, KIDNEY AND PANCREAS
WITH DETECTABLE LEVELS IN PLACENTA, LUNG AND HERRT. ACCORDING TO
REF.2, EXPRESSED IN THE PROSTATE, OVARY, THYROID AND SPLEEN, BUT
NOT FOUND IN KIDNEY, LIVER, LUNG, SKELETAL MUSCLE, BONE MARROW AND
                                                                                                                                                                                                                                     16-OCT-2001 (Rel. 40, Created)

"Structure and time-dependent behavior of acetylated and
non-acetylated forms of a molluscan metallothionein.";
Biochim. Biophys. Acta 1074:230-236(1991).
-!- FUNCTION: THE METALLOTHIONEINS ARE INVOLVED IN THE CELLULAR
SEQUESTRATION OF TOXIC METAL IONS.
-!- INDUCTION: BY CADMIUM.
-!- FIM: THIS MT OCCURS IN BOTH ACETYLATED AND NON-ACETYLATED FORMS.
-!- FIM: THIS MT OCCURS TO THE METALLOTHIONEIN SUPERFAMILY; FAMILY 2.

Davison A.J., Wright K.M., Harrach B.;
Phylogenetic position of an amphibian adenovirus.";
Submitted (JAN-2000) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: THIOL PROTESE CLEAVING SPECIFIC GLY-ALM PEPTIDES IN A NUMBER OF VIRAL PRECURSOR PROTEINS (TERMINAL, IIIA, VI, VII, VIII, NUMBER OF VIRAL PRECURED FOR VIRION MATURATION. ALSO CLEAVES HOST CELLS CYTOSKELETAL KERATINS K7 AND K18.
-!- CATALYTIC ACTIVITY: Cleaves proteins of the adenovirus and its host cell at two consensus sites: -Yaa-Xaa-Gly-Gly-|-Xaa- and -Yaa-Xaa-Gly-Axaa-Gly-(in which Yaa is Met, Ile or Leu, and Xaa is any amino acid).
